$$\begin{array}{c|c} \text{HO} & \text{OH} \\ \hline R_1 & \text{O} & \text{(I)} \\ \hline R_2 \text{O} & \text{O-Gk} \\ \end{array}$$

in which

R1 represents a hydrogen atom or an alkyl group; and
R2 represents a hydrogen atom; along with a pharmaceutically
acceptable adjuvant.

2. (Amended) A pharmaceutical preparation containing as an effective component a compound represented by the following formula (I):

$$R_1$$
 R_2 O O C C

in which R_1 represents a hydrogen atom or an alkyl group and R_2 combination hydrogen atom, in represents a pharmaceutically acceptable auxiliary, diluent, isotonic agent, preservative, lubricant and solubilizing aid, which is form pharmaceutically acceptable formulated in the of а preparation and has a potent effect for osteoporosis, arthritis and ruptured disc.

3. (Amended) A pharmaceutical preparation containing as an effective component a compound represented by the following formula (I):

in which R_1 represents a hydrogen atom or an alkyl group and R_2 represents a hydrogen atom, and one more materials selected from the group consisting of allendrate, tamoxifen, vitamin D₃, parathyroid hormone (PTH), sulfasalazine, thioredoxin reductase, alendronate, raloxifene, calcitonin, estradiol, genistein, 1,25dihydroxyvitamin D₃, estrogen receptor modulator, biphosphonates, shinbarometin and shinbarometin acetate, in combination with a pharmaceutically acceptable auxiliary, diluent, isotonic agent, preservative, lubricant and solubilizing aid, which formulated in the form of a pharmaceutically acceptable preparation and has a potent effect for osteoporosis, arthritis and ruptured disc.

4. (Amended) A process for preparing a compound of formula (I) wherein R_2 is a hydrogen atom, comprising hydrolyzing the compound of formula (I) wherein R_2 is cinnamoyl:

Pil

$$\begin{array}{c} OH \\ R_1 \\ R_2 O \end{array} \begin{array}{c} OH \\ O-Glc \end{array} \hspace{1cm} (I)$$

in which R_1 represents a hydrogen atom or an alkyl group.
